

SAP Solution Brief

SAP Solutions for Small Businesses and Midsize Companies

SAP Business One Version for SAP HANA

Run your growing business smarter, faster and simpler

Run Simple

Run your growing business smarter, faster and simpler

Speed and agility are vital to outmanoeuvring larger competitors with greater resources. You need to understand the implications of every decision and action without losing momentum – or losing sight of your vision.

That's why over 55,000 start-ups, scale-ups and subsidiaries worldwide trust the SAP Business One® application to manage their finances, sales, customers, purchasing, inventory and production planning. And now that performance can be supercharged with SAP Business One version for SAP HANA®, bringing the power of in-memory computing to application performance and Big Data analysis.

SAP Business One version for SAP HANA puts as-it-happens business insights into decision-makers' hands, to help them define and focus on the right priorities. With a single platform for analytics and transactions, you can solve the

seemingly unsolvable with real-time simulation and planning, and measurably boost the performance of all your key business processes.

Empower your employees to become more productive with information search capabilities and interactive analyses, and the ability to execute business tasks on the go from their mobile device. You won't experience any dip in performance as your workforce grows and more users access the software concurrently. And it's an opportunity to simplify your IT landscape with a single, streamlined solution that gives you big business value at a small business price.

Unlock valuable business insights

SAP Business One version for SAP HANA transforms reporting by searching your SAP Business One application data to give you the answers you need right now. Locate business data or transactional information as quickly and easily as you would search the internet, then filter, sort and drill down into the results.

Reports that used to take hours or days to run are compiled in minutes, if not seconds. And no matter how much data your business accumulates from any source, you can run highly complex and data-intensive analyses in real-time.

Benefit from embedded analytics to gain live, in-context insights instantaneously, to inform decision-making at the moment of truth or the point of transaction, and gain deeper insight into the past, present and future of your business.

Keep your customer promises

SAP Business One version for SAP HANA includes an advanced available to promise (ATP) app that provides real-time visibility into current inventory, ordered stock, replenished stock and stock being delivered. You can immediately reserve current stock for future delivery dates and reschedule existing orders on the fly.

Embed dashboards in transaction screens so front-line employees can see the data they need to make business decisions in the moment, such as customer purchasing habits or creditworthiness.

Equip your sales personnel to make intuitive product recommendations from within orders and quotations based on the customer's buying history and what similar customers were interested in.

See your cash position at a glance

For growing businesses, the quality of cash flow forecasting can make the difference between thriving or closing for good. SAP Business One version for SAP HANA includes a cash flow forecasting app that dramatically improves your cash balance visibility.

In a few clicks, you can configure the calculations to track the moving parts of your cash flow: sales

orders, purchase orders, down payments, recurrent postings and other critical cash-related transactions.

The end result is a clear snapshot of your cash balance, taking into account thousands of documents, accounts, orders and payments, so you can ensure you have the cash you need to run your business and seize new opportunities.

Easy on the IT

SAP Business One version for SAP HANA lets you run your business on a single, affordable enterprise solution that will scale as your enterprise grows. It simplifies your IT landscape by taking advantage of in-memory computing and by delivering application, database and integration services in one platform.

It will transform the efficiency of your IT team by eliminating the time-consuming data preparation, pre-aggregation and tuning tasks

demanding by traditional reporting and analytics tools, while empowering business users to do more on their own.

SAP Business One version for SAP HANA eliminates the layers of complexities and unnecessary business costs typical of legacy IT architecture, so your business can run simpler as well as smarter. With less hardware and maintenance than traditional database solutions, you can expect lower Total Cost of Ownership, too.

Summary

With the SAP Business One® version for SAP HANA®, you can instantly analyse growing volumes of data and gain the benefits of fast application performance without complicating your IT landscape. And with embedded analytics and high-performance apps, you can understand your growing business like never before.

Objectives

- Harness the power of SAP HANA to improve performance and agility while lowering IT costs
- Analyse growing volumes of data instantly to streamline business processes and improve decision making
- Run your business on a single, affordable enterprise solution that will scale as your business grows

Solution

- Real-time analytics that can crunch through all of your SAP Business One data in seconds
- New functionality enabling high-performance dashboards and reporting as well as real-time inventory, order management, and cash-flow visibility
- Single software platform that simplifies IT administration

Benefits

- Dramatically improved responsiveness of planning, sales, production, and financial processes
- Faster business insight for better decision making with more predictable outcomes
- Reduced IT ownership costs
