SCAN4SAP

Modules

As standard, all clients get the same modules. The only difference between customers is how many users they require to access the system. Once purchased, all system modules become active.

- **Purchasing**
  o Goods Receipt PO
  o Goods Return
- **Inventory**
  o Stock Transfer
  o Stock Transfer Request
  o Smart Transfer
  o Stock Finder
  o Stock Transfer from Stock Transfer Request
  o Stock Take
  o Goods Issue
  o Goods Receipt
- **Production**
  o Issue for Production
  o Receipt from Production
- **Pick & Pack**
  o Picking released Pick Lists
  o Packing picked Pick Lists
- **More**
  o Custom
  o Re-Print labels or documents
  o Statuses
  o Shop Floor Data Capture

What is it?

Plug-and-play warehouse management system for SAP Business One. What this basically means is that you'd be able to use all the warehouse-relevant SAP functions on a scanning device, live and seamlessly connected to the SAP Company. All the transactions are performed live, without the requirement of a middle-tier or a staging component.

Who are we?

We are a young company aiming to create fair and agile products for the ERP industry using SAP Business One. Founded in 2017, in London, UK, our flagship software is SCAN4SAP, a plug-and-play system that any business running SAP can use out of the box. All the complexity is tucked away behind a clean, easy to use interface so users can focus more on the warehouse operations and less in climbing a steep learning curve.

How does one get SCAN4SAP?

Let's take what we do one at a time. *Installation and setup* – no need to worry about unexpected costs or consultancy. There's none of that – you'll just know when an engineer is installing and configuring the system for you and when it's done and ready to use. Simple as that.

Is there support?

The support is the main gateway to any questions you might have regarding SAP or the product. Also, this is where you can request new features to be added as standard to the product. Nice and simple either through email, or through the support portal.

Do we get free upgrades?

Yes. From our experience in working with large systems, this can be a task on itself that needs preparation and additional resources and planning. Not with our WMS. New versions are announced a week in advance and applied automatically in a matter of seconds. Warehouse staff can just carry on working and update the handheld software at will with the press of a button.

Can we test before buying?

Before you even buy anything, a testing device and installation can be requested. Testing with an unlimited license for 60 days will make sure that what you are getting is what you actually imagined you would be getting. All of this *is free of cost* and just fair for users to see, hands-on, how the system looks and feels before deciding to purchase.

What if we don't have scanners or label printers onsite?

In case scanners, printers or labels are needed for your warehouse, we also offer of selection of solutions in the hardware area as well. Check out our website or reach out!

SCAN4SAP Typical Acquisition Process

When ordering our Standard Warehouse Management Product, these are the steps we normally go through to get the system up-and-running in no time.

1 Confirmation

You place the order with your SAP Partner our directly to us, you will receive in return a quote highlighting the expected prices for the licensed software and/or the hardware rental. If the quote is accepted, we'll continue with step 2 (deploy)

2 Deployment

We would request access to the SAP Server (either RDP, Team Viewer, WebEx, etc) so that the server component can be installed and verified. When requesting access, we would provide you with a standard form that has to be filled with all the details (the preferred access method, what SAP user should be used to communicate in the background with the ERP, etc). Once the form is filled, we would proceed with the deployment and confirm once it has been done.

3 Hardware

This is where you choose the type of hardware you'd like to use. It can be either rented from us (pre-used, certified for production, under full warranty) or buy new equipment from the supplier of your choice. The only prerequisite for the scanners is for the Operating System to be Windows Mobile 6.5. If the hardware is rented, all the software is pre-installed and shipped. If the hardware is bought from a different supplier, we would send the installation kit and installation manual.

4 Test for 60 Days

You are now ready to test free of charge for 60 days, the entire system having all functions activated. If you like what you received, you can choose to license it. Otherwise, the system will automatically expire and deny access at the end of the trial period.

5 Use

When the system has been licensed and hardware rental has been paid for, you will enter the licensed period. This means all updates and support are free of charge and we begin working together on further improving the product through feedback from your warehouse. We trust this process is fair and offers you the possibility of seeing exactly what you would receive and how you would operate before spending any budget. We look forward to having you as our client and starting a constructive relationship together.
